
About Us

We officially began operating in 2006 in Greensboro, North Carolina. We also serve the greater Triad area and will travel. Our customers are small businesses, non-profits, and individuals. Remote support is also available for many services. Stryker is licensed, insured, and certified. We perform computer and network services, consulting, project management, repairs, upgrades, installs, and maintenance. We address a wide range of technology related issues too.

We believe in fair pricing and listening to customers' needs guiding them in an honest fashion from start to finish. Instead of using big, technical terms we explain problems and solutions in a way that you can understand. We want to impress you with our results, not our vocabulary. Stryker understands that IT-related problems are frustrating, time consuming and prohibit you from getting your work done. Our goal is to minimize the impact of these problems and maximize customer satisfaction.

We rely heavily on client referrals and building a network of trust. Our skill set ranges from the simplest repair to complex projects dealing with medium-sized networks. Years of experience in small business environments, as well as working with individuals and their issues, have contributed to the wide range of problems we can resolve. Stryker also focuses on supporting the local community by giving back and caring for the environment by reducing waste and energy consumption. Overall, we believe doing business should be a mutually beneficial and satisfying experience for everyone involved.

We look forward to working with you!

IT Consulting

We provide IT (information technology) consulting services to small businesses including non-profits. Your business has many goals and

objectives. Choosing and implementing the technology to achieve them can be an overwhelming task. That is why we are here to help advise you every step of the way. Stryker understands the importance of solving problems as they arise quickly to get you back to work. We also believe in being proactive by implementing preventative maintenance strategies to minimize those problems from occurring.

We have a wide range of expertise. Please get in touch and we can provide a free half hour consultation with your organization to discuss your needs. Then we can move toward solutions.
